

KRAIBURG at EuroTier: Focus on comfort in the free stalls and dry walking areas

Tittmoning, 16 September 2026

At EuroTier 2026, KRAIBURG Elastik will showcase new solutions for lying comfort and the design of dry walking areas in dairy barns. The focus will be on the new KEW Plus Visco mattress systems as well as concepts that support rapid urine drainage from walking areas.

At **EuroTier 2026**, the world's leading trade fair for professional livestock farming in Hanover, KRAIBURG Elastik will present solutions for cattle and horse housing. At **Booth C31 in Hall 12**, the barn flooring specialist will provide information on elastic flooring for free stalls and walking alleys. The focus of the trade fair presentation will be on the new KEW Plus Visco and KEW Plus Visco TarsaCare **mattress systems**, as well as **flooring for dry walking areas**.

New mattress systems and flooring for dry walking areas are the focus at KRAIBURG © KRAIBURG Elastik

KEW Plus Visco: A new generation of comfort for free stalls

With [KEW Plus Visco](https://kraiburg-elastik.com/company/press/kraiburg-kew-plus-visco-provides-adaptation-to-the-body-provides-noticeable-relief/) <https://kraiburg-elastik.com/company/press/kraiburg-kew-plus-visco-provides-adaptation-to-the-body-provides-noticeable-relief/>, KRAIBURG

expands its proven KEW Plus mattress system with two options featuring visco-elastic memory foam. The four-layer structure, comprising a lower mat, upper mat, conventional foam and an additional visco-elastic layer, is approx. 10 cm thick. It is designed to adapt ideally to the cow's body shape and support even pressure distribution.

The 4-layer KEW Plus Visco TarsaCare mattress system, offering that extra touch of comfort © KRAIBURG Elastik

KEW Plus Visco achieves the **highest softness class, Class 4**, in accordance with DIN 3763. The functional cushion shape is designed to allow liquids to drain away from the lying area – for improved hygiene of the lying area. Sealing lips also completely enclose the foam layers and the lower mat.

The **KEW Plus Visco TarsaCare** option features a TarsaCare comfort zone in the rear third of the mat, comprising pliant ball-shaped segments. This structure is designed to provide gentle support in the area of the hock joints. It can also promote the ventilation of the skin and retain small amounts of bedding.

The mattress systems are suitable for free stalls with suspended dividers and mushroom dividers. From a width of 120 cm, a lying length of 1.92 m is available. This creates more space for natural movements when lying down, lying and getting up.

KEW Plus Visco adapts optimally to the cow's body shape and provides noticeable pressure relief © KRAIBURG Elastik

Dry walking areas: hoof health and emission reduction

Another focus at the KRAIBURG booth is on **walking area concepts that reduce emissions**. They combine an adequate slope, suitable drainage and easy-to-clean surfaces. The aim is to drain urine quickly from the walking surface and shorten the contact time between urine and feces in the walking alley. This reduces ammonia formation on the walking areas.

Dry, clean walking areas **reduce stress on the hooves**. The skin in the hoof area in particular can be affected by persistently wet and soiled floors. Animal-friendly soft, slip-resistant flooring also supports safe walking and **improves pressure distribution** while standing and walking.

profiKURA 3D – integrated slope in the walking alley mat © KRAIBURG Elastik

For **paved walking alleys**, KRAIBURG will present the wedge-shaped **profiKURA 3D**

<https://kraiburg-elastik.com/company/press/kraiburg-profikura-3d-easily-integrating-a-slope-into-the-walking-alley/>, among other solutions. It provides a slope of approx. 3 % toward the center of the walking alley directly through the mat and is suitable for both new buildings and retrofitting existing barns. The **profiDRAIN**

<https://kraiburg-elastik.com/company/press/kraiburg-profidrain-drain-channel-mat-drier-walking-alleys-healthier-hooves-fewer-emissions/> drain channel mat combines soft walking surfaces with a slope of approx. 6 % toward the drain channels in order to effectively collect and drain liquids.

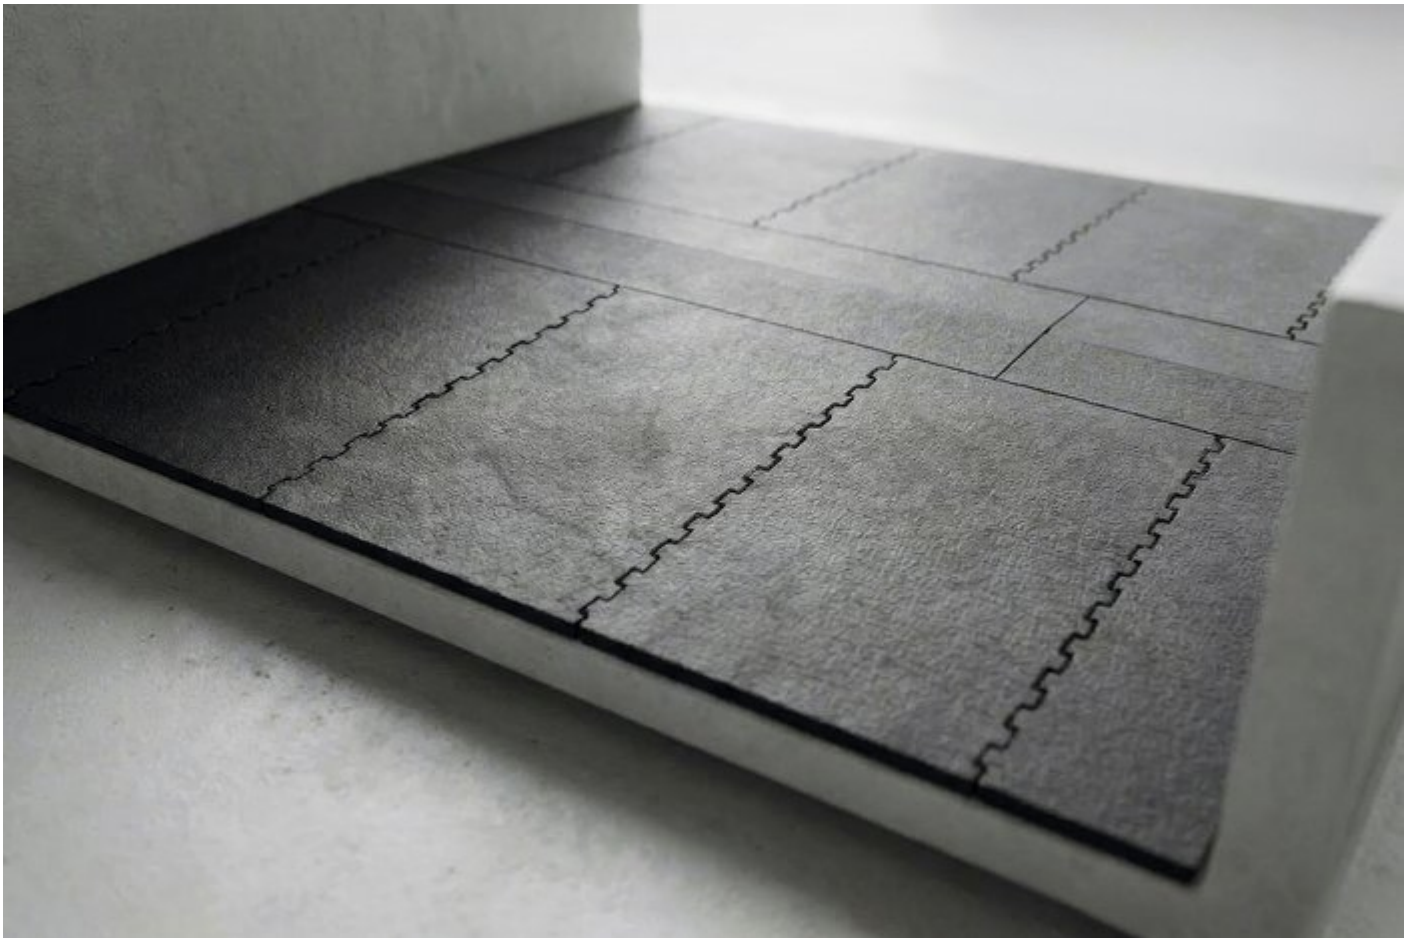

The profiDRAIN drain channel mat combines walking comfort with reduced emissions © KRAIBURG Elastik

For **slatted floors**, KRAIBURG offers **espaFLEX** <https://kraiburg-elastik.com/company/press/kraiburg-espaflex-rethinking-slatted-floors/>, a slat mat with a slope on both sides from the center of the mat to the edges. It combines an elastic, slip-resistant walking surface with a variably configurable slit pattern. This makes it possible to meet the requirements for animal comfort, drainage and partial coverage of the slurry pit in the respective barn concept.

The espaFLEX slit coverage can be configured in many ways © KRAIBURG Elastik

Another **new** feature is **CowCross** <https://kraiburg-elastik.com/company/press/kraiburg-cowcross-self-draining-rubber-flooring-for-drier-crossing-passages/>, a self-draining rubber flooring for **elevated crossing passages**. Its integrated slope directs urine and water from drinking troughs into the adjacent walking alleys, where manure scrapers or manure removal robots collect the liquids at regular intervals. This helps to keep hygiene-sensitive areas drier and reduces the time hooves are exposed to moisture and soiling.

The integrated slope towards the edges allows for effective self-draining © KRAIBURG Elastik

Exchange with specialists at the trade fair booth

With these two key topics, KRAIBURG addresses core requirements of modern dairy farms: comfortable lying areas, safe and as-dry-as-possible walking areas and practical barn design. Visitors can learn about the respective solutions, application options and the most suitable design for their farm at the booth.

About KRAIBURG Elastik

Gummiwerk KRAIBURG Elastik GmbH & Co. KG has been developing and manufacturing elastic rubber flooring for cattle and horse housing since 1968. In Tittmoning, Germany, around 200 employees combine experience in rubber processing with practical product development. The aim is to support animal welfare, safety, performance and efficient barn management with innovative solutions. The DIN-compliant products are tested in the company's own laboratory, in test barns and by independent institutes. KRAIBURG Elastik holds the DLG quality seal 'CONTINUOUS MONITORING'. The barn flooring specialist is committed to resource-saving production and repurposes tire rubber as a raw material for robust flooring. The company is part of the KRAIBURG Group.
