

KRAIBURG Elastik: Specialist in rubber flooring for animal housing

Tittmoning, 19 August 2026

KRAIBURG Elastik has been developing and manufacturing elastic rubber flooring since 1968. The focus is on practical solutions designed to enhance animal comfort and safety as well as to ensure efficient management in the barn.

Using a unique manufacturing process, KRAIBURG Elastik develops and produces elastic rubber flooring for cattle and horse housing in Tittmoning / Germany. Since 1968, the company has combined its rubber expertise with practical product development. The aim is to support animal husbandry farmers with solutions that effectively combine animal welfare, safety and economic efficiency in the barn.

KRAIBURG: Elastic flooring for dairy cattle and beef fattening

For **dairy farms**, **KRAIBURG** offers flooring solutions for free stalls, walking areas, milking areas and other functional areas, amongst others. The products are tailored to their respective areas of application and support the design of lying and walking areas that are animal-friendly.

Cattle naturally prefer soft, yielding grounds. Elastic flooring helps to improve lying comfort and provides animals with secure footing on frequently used walking areas. This has a positive effect on **joint and hoof health**. In **beef fattening** too, the flooring supports more natural movement patterns, even under heavy loads.

Soft lying areas and animal-friendly walking areas improve animal welfare © KRAIBURG Elastik

BELMONDO: Solutions for horse housing

In addition to flooring for cattle housing, KRAIBURG Elastik develops and manufactures rubber flooring for **horse husbandry** under the **BELMONDO** brand. The products are designed for various areas such as looseboxes, stable walkways, washdown areas and horse walkers. Depending on the application, features such as slip resistance, comfort and a robust design take priority.

Practical product development and certified quality

Product development is closely aligned with agricultural practice. The barn flooring specialist tests its DIN-compliant products in its own laboratory, in test barns and through independent institutes. KRAIBURG Elastik was the first company to be awarded the **DLG quality seal 'CONTINUOUS MONITORING'**. As part of the seal, **manufacturing processes** are **regularly audited** and **environmental criteria** are monitored. The underlying testing procedure was developed by the DLG in cooperation with the Fraunhofer Institute.

To continuously ensure effective quality, energy and environmental management, the company is certified according to the internationally recognized standards **ISO 9001, ISO 50001 and ISO 14001**.

Through its participation in the **UN campaign "Vision 2045"**, KRAIBURG Elastik presents its activities and goals related to **responsible corporate development**. The accompanying KRAIBURG film demonstrates how animal welfare and environmental protection complement one another in the company's philosophy.

"Quality and transparency are very important to us. Our customers must be able to rely on quality 'Made in Germany' - on the benefits and durability of our products, as well as on our competitive edge on innovation," summarizes **Markus Wallner, General Manager of KRAIBURG Elastik**.

Efficient use of resources with environmental protection in mind

Tires are an **ideal raw material** for durable products in animal husbandry. The sophisticated manufacturing process preserves key properties such as **dimensional stability, elasticity** and **abrasion resistance**. Valuable rubber is reused efficiently, and production offcuts can also be returned to the rubber cycle. KRAIBURG Elastik **recycles around 35,000 metric tons of rubber each year**. This corresponds to **roughly 7.5 million passenger car tires**. Instead of mineral plasticizer oils, the company uses exclusively **vegetable oils** from European cultivation.

The rubber compounds and production processes are **continuously developed** to meet the ever-increasing requirements for **quality, durability** and the respective **conditions of use**.

A reliable partner for animal husbandry

Around 200 employees work at the Tittmoning site in production, engineering, logistics, administration, sales and product development. Different specialist departments work together to address the requirements of livestock farmers and translate them into practical flooring solutions. The company also provides training in various professions, thereby securing **expertise at the site**. KRAIBURG Elastik is **part** of the globally active, family-owned **KRAIBURG Group**.

With around 60 years of experience, an international dealer network and a clear focus on quality and customer proximity, KRAIBURG supports livestock farmers in many countries around the world. The focus is on solutions tailored to the **individual conditions** in the barn, combining the **commitment to animal welfare, safe work processes and efficiency**.
