

The deep bedded stall cushion - the ideal addition to the deep bedded stall

The 10 cm thick cushion consisting of 2 functional layers replaces the bottom, thick layer of bedding in the head space of the deep bedded stall, which is difficult to maintain, and thus provides a permanently stable and comfortable substructure. This protects joints, offers easy management and saves on bedding. The fixings are countersunk in the surrounding edge. The deep bedded stall system remains unchanged in the rear area.

- Upper mat with large air cushions: Keeps the layer of bedding in place and is super soft
- Lower mat with blade profile: Ideal cushioning when getting up or lying down
- Gentle transition from rubber cushion to bedding

Technical data

Dimensions	Thickness	Width	Length
POLSTA	ca. 10 cm / 4"	110 cm / 43 ¼"	91 cm / 35 ⅞"

Installation and fixing

Mats are installed in the head space of the deep bedded stall.
